ABSTRACT

Population estimates for standard metropolitan statistical areas (SMSAs) for July 1, 1973 and July 1, 1974 are summarized in this report. Estimates are shown for the first time for 13 standard consolidated statistical areas (SCSA's)--large metropolitan agglomerations consisting of groups of adjacent SMSA's having a certain level of intercommunicating and generally sharing a continuous urban mass as indicated by an overlapping urbanized areas or adjacent urbanized areas. By mid-1974 the population in metropolitan America is estimated to have reached 155 million. Of our total population 73.2 percent now lives in metropolitan areas compared with 56 percent in 1951. As a group, the largest SMSA's in 1970, those with 2 million or more people each have experienced no growth between 1970 and 1974. Contributing to the halt in the growth of these areas is the decline in the number of births, with the result that natural increase for the 1970's has been far below the average of the last decade. Growth in the metropolitan population in the early 1970's has been confined largely to the South and West, with the fastest-growing metropolitan areas heavily concentrated in Florida. The extension of the SCSA concept to cover other large areas in addition to New York and Chicago provides a more realistic appraisal of large metropolitan complexes than can be made using SMSA's. (Author/AM)

CURRENT POPULATION REPORTS

Population Estimates and Projections

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

Series P-25, No. 618 Issued January 1976

ESTIMATES OF THE POPULATION OF METROPOLITAN AREAS, 1973 AND 1974, AND COMPONENTS OF CHANGE SINCE 1970

This report is a summarization of population estimates for standard metropolitan statistical areas (SMSA's) for July 1, 1973 and July 1, 1974, published earlier in **Current Population Reports**, Series P-26 and P-25. Provisional components of population change for the period April 1, 1970 to July 1, 1974 are also shown. Comparable estimates for all counties are published in **Current Population Reports**, Series P-25, No. 620.

Figures are shown for SMSA's and their constituent counties as defined by the Office of Management and Budget through December 1975. New SMSA's and changes in definitions of existing SMSA's made since the 1970 census are identified by an asterisk in table 1.

Estimates are shown for the first time for 13 standard consolidated statistical areas (SCSA's) newly defined by the Office of Management and Budget in 1975. These are large metropolitan agglomerations consisting of groups of adjacent SMSA's (1) having a certain level of intercommuting and (2) generally sharing a continuous urban mass as indicated by an overlapping urbanized area or adjacent urbanized areas. SCSA's are designated only when one of the adjacent SMSA's has at least 1 million population. Areas had previously been defined only for New York and Chicago.

TRENDS IN GROWTH PATTERNS

By mid-1974 the population in metropolitan America is estimated to have reached 155 million (table 5). This is an increase of 5 million or 3.4 percent since 1970. Almost three-quarters of our population (73.2 percent) now lives in metropolitan areas compared with 56 percent in 1950.

During the 1970-74 period the nonmetropolitan population by comparison grew 5.5 percent. This is a rare period in recent American history when nonmetropolitan America has grown faster than its metropolitan counterpart. Metropolitan areas increased during the 1940's, 1950's, and 1960's by several multiples of the increase for the rest of the United States. Although this differential growth has come to be taken for granted, the pattern has not held true for the early 1970's.[1]

The largest SMSA's in 1970, those with 2 million or more people each, as a group have experienced no growth between 1970 and 1974 (table 5). Comparisons for the standard consolidated statistical areas which include those SMSA's show essentially the same pattern. Eight of the 15 SMSA's are estimated to be losing population, including the five largest, and only the Dallas-Fort Worth area now exceeds the national rate of growth. Although many large cities in the past several decades have lost population, it has been rare for a whole metropolitan area to do so—only Pittsburgh of the very large SMSA's in the 1960's. In fact over 1.7 million more persons are estimated to have moved out of these 15 areas than have moved in during the early 1970's, with the New York SMSA alone accounting for a net migration loss of half a million. Only three of these areas gained population through migration, with the largest gain being barely 1 percent (Baltimore). During the 1960's these same areas gained a net of 1.1 million migrants.

Also contributing to the halt in the growth of these areas has been the decline in the number of births, with the result that natural increase (births minus deaths) for the 1970's has been far below the average of the last

[1] For a rationalization for this turnaround see Calvin L. Beale, "The Revival of Population Growth in Nonmetropolitan America," U.S. Department of Agriculture publication ERS-605.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, and U.S. Department of Commerce district offices. Price 75 cents. Current Population Reports issued in Series P—20, P—23, P—25, P—26, P—27, P—28 (summaries only), P—60, and P—65 are sold as a single consolidated subscription at $56.00 per year, $14.00 additional for foreign mailing.

decade. This decline in the birth rate has been a continuous national phenomenon since the late 1950's, accelerating in the 1970's. Relatively few areas (notably Utah) have failed to experience sharp declines in the period since 1970. Natural increase for these 15 areas was 5.7 million over a 10-year period in the 1960's but only 1.5 million in 4 1/4 years in the 1970's.

Since 1970 the population of SMSA's below 2 million population is increasing at about the same rate as nonmetropolitan America, although those SMSA's are growing well below their rate of increase during the 1960's.

Growth in the metropolitan population in the early 1970's has been confined largely to the South and West, with metropolitan Florida having an increase of almost 19 percent, Arizona 21 percent, and the Mountain States as a whole 15 percent. Metropolitan areas in the Northeast as a group lost population, and those in the North Central Region had a very small increase.

The fastest-growing metropolitan areas in the 1970's are heavily concentrated in Florida (table A). Seven of the 13 areas with increases of 20 percent or more are located in that State (the U.S. increased by 4.1 percent). The leader, Ft. Myers (+46.4 percent), is followed by Sarasota and Ft. Lauderdale-Hollywood, both with about a 30-percent increase. Colorado, Arizona, and Texas each have two metropolitan areas among the high-growth SMSA's. Only Tampa-St. Petersburg and Phoenix of the areas of 1 million or more were among this select group of growth areas.

The extension of the standard consolidated statistical area concept to cover other large areas in addition to New York and Chicago provides a more realistic appraisal of large metropolitan complexes than can be made using SMSA's (tables 2 and 4). The New York consolidated area with 17 million population in 12 SMSA's is by far our largest metropolis. The Los Angeles consolidated area covers 4 SMSA's with 10 million population. Other large consolidated areas are Chicago with 7.6 million population, Philadelphia with 5.6 million, and the Detroit and San Francisco areas with 4.7 and 4.6 million respectively.

Table A. SMSA's Ranked by Rate of Population Growth, 1970 to 1974

Standard metropolitan statistical area and State	Percent change, April 1, 1970 to July 1, 1974	Rank by rate of growth
Fort Myers, Fla.	46.4	1
Sarasota, Fla.	32.0	2
Fort Lauderdale-Hollywood, Fla.	30.1	3
Fort Collins, Colo.	28.0	4
Orlando, Fla.	27.7	5
West Palm Beach-Boca Raton, Fla.	27.1	6
Killeen-Temple, Tex.	26.6	7
Tucson, Ariz.	23.3	8
Colorado Springs, Colo.	22.7	9
Tampa-St. Petersburg, Fla.	22.5	10
Tallahassee, Fla.	21.3	11
Phoenix, Ariz.	20.9	12
Austin, Tex.	20.3	13

TECHNICAL NOTES

All 272 SMSA's in the United States are listed in table 1 in alphabetical order together with their constituent counties. For New England metropolitan areas, however, where towns rather than counties are the components of SMSA's, estimates are shown for the nearest equivalent New England county metropolitan areas (NECMA's) designated by the Office of Management and Budget in 1975. Census counts for 1970 are shown for all areas.[2] Population estimates are shown for July 1, 1973 and 1974 with components of change from 1970 to 1974. Births and deaths are based on reported vital statistics from April 1, 1970 to December 31, 1973, with extrapolations to June 30, 1974. Net migration is the difference between net change and natural increase. The net migration component therefore includes net internal migration, net immigration from foreign countries and outlying areas (including Puerto Rico), and net returns from abroad of military personnel and other citizens.

The estimates presented here have been derived for the most part from county estimates developed jointly by designated State agencies and the Bureau of the Census under the Federal-State Cooperative Program for Population Estimates (FSCP) and published in **Current**

[2] Populations for 1970 reflect any corrections made to county totals. These corrected totals have been used as the base for preparing current estimates for these counties.

Population Reports, Series P-26.[3] Estimates for the counties in six of the States were developed by the Bureau of the Census and published in Series P-25. Appendix B indicates the series and report numbers pertaining to each State. Methodology, which may vary from State to State, is discussed in each State report. Commonly, the Regression (ratio-correlation) method, Component Method II, and an Administrative Records method using Federal income tax returns to estimate migration were drawn upon for the 1973 estimates, sometimes in combination with other methods. Component Method II and the Housing Unit method were used to estimate change from 1973 to 1974 for all States but Arizona, California, Nebraska, and Washington.

An evaluation of several of the methods commonly used in preparing these estimates is contained in **Current Population Reports,** Series P-25, No. 21. That report summarizes a test of methods for estimating the population of 2,600 counties against the 1970 census. For a 10-year period the average deviation from the census for an average of the Regression method and Component Method II was 3.1 percent for metropolitan counties. There could be only limited testing of the Administrative Records method against the 1970 census because the data input to the method did not become fully available until the late 1960's. Results of tests of this method for the periods 1968-70 and 1970-73 are published in Series P-25 in any of Reports 546 to 595.

[3] For a discussion of the evolution and goals of the Federal-State Cooperative Program see **Current Population Reports,** Series P-26, No. 118, "Federal-State Cooperative Program for Local Population Estimates—Status Report: January 1975," July 1975.

Except in New England, a standard metropolitan statistical area consists of a county containing a city of 50,000 inhabitants or more. Contiguous counties are included in an SMSA if they are metropolitan in character and are socially and economically integrated with the central city. A county containing a city of less than 50,000 population may constitute an SMSA if the addition of densely settled adjacent places would bring the city up to the 50,000 level and the SMSA has at least 75,000 population. In New England, towns rather than counties are the components of SMSA's. With only two exceptions, the central cities of each SMSA are specified in the title of the SMSA.

A detailed explanation of the criteria used in establishing SMSA's appears in **Standard Metropolitan Statistical Areas,** Executive Office of the President, Bureau of the Budget (now Office of Management and Budget), 1967. A revised edition of this publication will be published in early 1976. A statement of the criteria incorporating changes made since 1970, together with post-1970 SMSA definitions is presented in National Bureau of Standards, Federal Information Standards, Publication 8-4, **Standard Metropolitan Statistical Areas,** June 30, 1974. Several areas have since been designated, bringing the total number of SMSA's to 272, excluding four areas in Puerto Rico not covered in this report.

All estimates are consistent with State population estimates for 1973 and 1974 previously published in Series P-25, No. 533. An index of State, SMSA, county, and place estimates published by the Bureau of the Census for the 1970's is shown in appendix A.

The estimates presented in this report have been rounded to the nearest hundred without being adjusted to group totals, which were independently rounded. Percentages are based on unrounded numbers.

LIST OF TABLES

Table — Page

1. Estimates of the population of standard metropolitan statistical areas and their constituent counties: July 1, 1973 and 1974 5

2. Estimates of the population of standard consolidated statistical areas and their constituent SMSA's: July 1, 1973 and 1974 25

3. Estimates of the population of standard metropolitan statistical areas by population rank size: 1974 26

4. Rank of large metropolitan agglomerations by population size, 1974 and 1970 30

5. Estimates of the population of standard metropolitan statistical areas, July 1, 1974, by population size class 30

6. Estimates of the metropolitan population by State: July 1, 1973 and 1974 31

7. Estimates of the nonmetropolitan population by State: July 1, 1973 and 1974 32

[1]Births and deaths are based on reported vital statistics from April 1, 1970 to December 31, 1973, with extrapolations to June 30, 1974. Net migration is the difference between net change and natural increase.

[2]New England County Metropolitan Area. The population of the Boston SMSA in 1970 was 2,899,101; for the Lowell SMSA it was 218,268; for the Brockton SMSA it was 150,416; for the Lawrence-Haverhill SMSA it was 258,564.

[3]New England County Metropolitan Area. The population of the Bridgeport SMSA in 1970 was 401,752; for the Stamford SMSA it was 206,340; for the Danbury SMSA it was 115,538; for the Norwalk SMSA it was 127,535.

[4]Area created by the merger of the Charlotte and Gastonia* SMSA's.

[5]Area created by the merger of the Dallas and Fort Worth SMSA's.

[6]Lapeer County deleted from the Flint SMSA since 1970 and added to the Detroit SMSA.

[7]Area created by the merger of the Greenville and Spartanburg* SMSA's.

[8]New England County Metropolitan Area. The population of the Hartford SMSA in 1970 was 720,581; for the New Britain SMSA it was 145,269; for the Bristol SMSA it was 69,878.

[9]New England County Metropolitan Area. The population of the Lewiston-Auburn SMSA in 1970 was 72,474.

[10]New England County Metropolitan Area. The population of the Manchester SMSA in 1970 was 132,512; for the Nashua SMSA it was 86,280.

[11]New England County Metropolitan Area. The population of the New Bedford SMSA in 1970 was 161,288; for the Fall River SMSA it was 169,549.

[12]New England County Metropolitan Area. The population of the New Haven-West Haven SMSA in 1970 was 413,722; for the Waterbury SMSA it was 216,808, for the Meriden SMSA it was 55,959.

[13]New England County Metropolitan Area. The population of the New London-Norwich SMSA in 1970 was 241,862.

[14]Nassau and Suffolk Counties deleted from the New York SMSA since 1970 to create the Nassau-Suffolk SMSA.

[15]Includes Poquoson city, now independent of the county.

[16]Area created by the merger of the Scranton and Wilkes-Barre-Hazleton SMSA's.

[17]Bergen County deleted from the Paterson-Clifton-Passaic SMSA since 1970 and added to the New York SMSA.

[18]New England County Metropolitan Area. The population of the Pittsfield SMSA in 1970 was 96,817.

[19]New England County Metropolitan Area. The population of the Portland SMSA in 1970 was 170,081.

[20]New England County Metropolitan Area. The population of the Providence-Warwick-Pawtucket SMSA in 1970 was 908,887.

[21]Area created by the merger of the Raleigh and Durham SMSA's.

[22]Area created by the merger of the Salt Lake City and Ogden SMSA's.

[23]New England County Metropolitan Area. The population of the Springfield-Chicopee-Holyoke SMSA in 1970 was 541,752.

[24]Includes Manassas and Manassas Park cities, now independent of the county.

[25]Archer County deleted from the Wichita Falls SMSA since 1970.

[26]New England County Metropolitan Area. The population of the Worcester SMSA in 1970 was 372,144; for the Fitchburg-Leominster SMSA it was 97,164.

APPENDIX A

INDEX OF STATE, SMSA, COUNTY, AND PLACE ESTIMATES FOR THE 1970'S

(With available 1960-70 intercensal series. A break in 1970's time series is indicated by a line above which the Administrative Records method was averaged with existing methods)

Area	Source (Series P-25 number unless otherwise indicated)
STATES	
1974-75 estimates	615
1973-74 estimates	533
1970-73 annual estimates	520
Components of change, 1960-70 (prelim.)	460
1960-70 annual estimates (prelim.)	460
SMSA's	
1973-74 estimates	618
1972-73 estimates	537
1971-72 estimates	505
Components of change, 1960-70 (prelim.)	1970 Census of Population and Housing, Series PHC(2), "General Demographic Trends for Metropolitan Areas, 1960-70." Individual State reports.
COUNTIES	
1973-74 estimates	620
1972-73 estimates	527, 530-32, 535; Series P-26, No. 49-93. Individual State reports. See appendix B.
1971-72 estimates	517
Components of change. 1960-70 (prelim.)	461
PLACES	
1973 estimates	Series P-25, No. 546-595. Individual State reports. See appendix C.

APPENDIX B

INDEX OF ESTIMATES PUBLISHED IN SERIES P-26 REPORTS SINCE 1970

(Reports issued under the Federal-State Cooperative Program for Population Estimates, jointly prepared by the Bureau of the Census and designated State agencies)

State	Report No.			State	Report No.		
	1973 and provisional 1974	1972 and provisional 1973	1971 and provisional 1972		1973 and provisional 1974	1972 and provisional 1973	1971 and provisional 1972

*First year only. For second year, see Series P-25, No. 517.

[1]County or county equivalent estimates for 1973 and provisional 1974 are published in Series P-25 for the following States: Maryland, No. 596; Washington, No. 597; New York, No. 599; Oregon, No. 602; Alaska, No. 604; and Texas, No.609.

[2]County or county equivalent estimates for 1972 and provisional 1973 are published in Series P-25 for the following States: Alaska, No. 531; California, No. 532; Maryland, No. 530; New York, No. 527; and Texas, No. 535.

[3]County estimates for this State for 1971 and provisional 1972 are published in Series P-25, No. 517.

U.S. Department of Commerce
BUREAU OF THE CENSUS

CURRENT POPULATION REPORTS

Population Estimates and Projections

Series P-25, No. 618

Issued February 1976

ESTIMATES OF THE POPULATION OF METROPOLITAN AREAS, 1973 AND 1974, AND COMPONENTS OF CHANGE SINCE 1970

ERRATA SHEET

Table 1 contains errors on page 10. The data for Eau Claire, Wisconsin and El Paso, Texas should read:

Standard metropolitan statistical area and county	July 1, 1974 (provisional)	July 1, 1973	April 1, 1970 (census)	Change, 1970 to 1974		Components of change, 1970 to 1974			
				Number	Percent	Births	Deaths	Net migration	
								Number	Percent
EAU CLAIRE, WIS*	123,700	120,600	114,936	8,700	7.6	7,900	4,400	5,200	4.5
Chippewa*	48,700	49,000	47,717	1,000	2.1	3,400	1,800	-600	-1.3
Eau Claire*	74,900	71,600	67,219	7,700	11.5	4,500	2,500	5,800	8.6
EL PASO, TEX	410,000	391,600	359,291	50,700	14.1	39,200	9,800	21,200	5.9
El Paso	410,000	391,600	359,291	50,700	14.1	39,200	9,800	21,200	5.9

Page 20:
The July 1, 1974 provisional estimate for San Diego, California should read 1,518,000. The other data for the SMSA are correct.

Page 21:
The Savannah, Georgia figure for change, 1970 to 1974 should read -9,000. The other data for the SMSA are correct.

Table 3, page 28:
The July 1, 1974 provisional estimate for Manchester-Nashua, N.H. should read 238,500. The other data for the area are correct.
